

Competitor Analysis Report

Ai Automation For Real Estate Agents

Report Period: July 2026 | Generated: 2026-07-01

Executive Summary

Every major competitor is a self-serve SaaS platform requiring agents to learn and operate the tool themselves — Adar Realty Studios operates in a distinct 'done-for-you' category with no direct competitor at scale. The solo agent market (60%+ of NAR's 1.5M members) is severely underserved: most capable platforms are priced at \$449–\$1,500+/mo for teams and brokerages. Lofty AOS (launched February 2026) is the market's first agentic AI operating system for real estate and the closest indirect threat to a done-for-you positioning — worth monitoring closely. Lead quality vs. quantity is the top pain point across all eight platforms; agents overpay for volume that doesn't convert, creating clear demand for outcome-focused automation. Voice AI is setting the engagement benchmark: Ylopo's RAIYA has logged 25M+ conversations at 48% response rates and is quickly becoming an expected feature.

Market Overview

The AI automation market for real estate agents has matured rapidly through 2026, with 72% of agents now integrating AI into daily workflows. The market is bifurcating between large all-in-one platforms that added AI layers onto legacy CRM/IDX infrastructure, and AI-native tools targeting specific workflow pain points. Eight primary competitors were analyzed across a spectrum from solo-agent CRMs to enterprise brokerage platforms. All eight are SaaS products; none offers done-for-you custom automation at scale, leaving an uncontested lane for a service-based agency model. Market size is estimated at ~\$3.2B in 2026, growing at 28% CAGR.

Competitor Profiles

Structurely

<https://structurely.com>

Pricing	\$179/mo Starter (50 leads), \$299/mo Growth (125 leads), \$499/mo Build (225 leads) — or \$3/lead variable pricing.
Target Market	Individual agents, real estate teams, and brokers handling high inbound lead volume

Strengths	Weaknesses
• Long-term autonomous nurture (12+ months) without agent involvement • 60+ native integrations with real estate CRMs and lead sources • Real-time live transfer routes qualified leads directly to agents	• Not a full CRM — must be layered on top of another system • Per-lead pricing gets expensive at scale (600–700 leads/mo) • Limited to text/chat channels; no voice AI or full marketing suite

Notable: ■ 12-month autonomous nurture ■ Live transfer to agent ■ \$3/lead flexible pricing

Lofty (formerly Chime CRM)

<https://lofty.com>

Pricing	Quote-based. Estimated \$449/mo for individual agents, \$1,500+/mo for enterprise. Setup fees \$299–\$1,499. Not publicly listed.
Target Market	Individual agents, teams, and brokerages of all sizes; powers large networks including RE/MAX and eXp Realty

Strengths	Weaknesses
• First 'agentic AI operating system' for real estate — proactive, multi-agent automation • 33+ built-in lead generation methods in a single platform • Strong IDX website integration with behavioral automation (lead views listing = auto text)	• High cost makes it inaccessible for solo agents or small operations • Steep learning curve — users report slow time-to-value • Variable support responsiveness noted across user reviews

Notable: ■ Lofty AOS multi-agent system (Feb 2026) ■ 33+ lead gen sources ■ Behavioral trigger automation

Follow Up Boss

<https://followupboss.com>

Pricing	\$69/mo Grow base, \$416/mo Pro, \$833/mo Platform. Per-seat pricing. Publicly listed.
Target Market	Solo agents and teams under 25 agents; best fit for teams under 15

Strengths	Weaknesses
• Most polished UX in the real estate CRM category — low ramp-up time • AI drafts lead responses in the agent's own style, free on all plans • Unlimited contacts and 7-day support; strongest integration ecosystem	• Zillow ownership creates data privacy concerns — agents share leads with a competitor • No native transaction management — requires expensive add-ons (\$20–45/user/mo) • Per-seat pricing escalates fast past 10 users

Notable: ■ Zillow-owned (data risk) ■ AI response drafting on all plans ■ 500+ integrations

Sierra Interactive

<https://sierrainteractive.com>

Pricing	\$299.95/mo Starter (1 user), \$399.95/mo Essential (3 users), \$599.95/mo Growth (5 users). Annual pricing; \$500 setup fee waived annually. Lead Engage add-on \$199/mo.
Target Market	Growing teams and brokerages; scales to 50+ agent operations at ~\$5/user/mo

Strengths	Weaknesses
• Conversion-focused IDX website builder paired with CRM in a single system • Scales efficiently for large teams — per-user cost drops significantly at volume • Dedicated onboarding and premium support on Growth plan	• High setup cost and annual commitment required for best pricing • AI features limited compared to dedicated AI tools like Structurally or Ylopo • Solo agents overpay for team infrastructure they don't need

Notable: ■ Lead Engage add-on (unlimited automation) ■ \$500 setup fee ■ Scales to enterprise

kvCORE / BoldTrail (Inside Real Estate)

<https://kvcore.com>

Pricing	Quote-based. Estimated \$25–\$30/mo solo, \$449–\$599/mo small teams, \$1,500+/mo brokerages. Not publicly listed.
Target Market	Individual agents to enterprise brokerages; primary strength is large team and franchise deployments

Strengths	Weaknesses
-----------	------------

• Trusted by the largest brokerages in the country — proven at enterprise scale • Behavioral lead nurturing auto-triggers based on live listing activity • Bundles IDX website + CRM + marketing, reducing need for multiple tools	• Opaque pricing — agents report difficulty getting clear quotes • Steep learning curve; platform complexity causes slow adoption • Reported technical issues: slow loading speeds and occasional glitches
--	--

Notable: ■ Powers RE/MAX and eXp Realty ■ Behavioral AI triggers ■ Being rebranded as BoldTrail

Ylopo

<https://ylopo.com>

Pricing	Partial public pricing. Core Solution ~\$300–\$500/mo; Suite+ ~\$500–\$1,000/mo. AI Voice and AI Text add-ons ~\$100/level each. Setup fee \$1,000–\$1,500. Ad spend not included.
Target Market	New agents (years 1–2) and small buyer-focused teams needing high lead volume on a budget

Strengths	Weaknesses
• AI text engine battle-tested at scale — 25M+ conversations at 48% response rate • Listing Rocket and DyVA automate property-specific ad creation with no design skills needed • Integrates cleanly with Follow Up Boss, Real Geeks, and other major CRMs	• Total monthly cost is unpredictable — platform fee + setup + ad spend adds up fast • Not a full CRM; must be paired with another system • Generates high-volume, low-intent leads that require strong conversion skills

Notable: ■ RAIYA: 25M+ conversations, 48% response rate ■ AI Voice calls leads 14x/90 days ■ Listing Rocket auto-ad creation

Real Geeks

<https://realgeeks.com>

Pricing	\$299/mo Establish (1–2 agents), \$599/mo Grow (includes Geek AI), \$999/mo Expand, \$1,599/mo Conquer. Real cost is 2–3x sticker price when MLS feeds and add-ons are included. Publicly listed.
Target Market	Agents and teams at all levels; best value for agents spending under \$2,000/mo on ads

Strengths	Weaknesses
-----------	------------

• Best price-to-value ratio in the real estate lead gen platform category • Estate IQ seller lead tool included at no extra cost on all plans • Strong customer support and active community; 4.5/5 on G2 from 108 reviews	• Limited website customization — templates are functional but inflexible • Cancellation disputes documented; 2-month buyout penalty and 15 BBB complaints • Real total cost significantly higher than advertised once add-ons are factored in
--	--

Notable: ■ Geek AI 24/7 lead qualification ■ Estate IQ seller tool on all plans ■ 4.5/5 G2 rating

CINC (Commissions Inc.)

<https://cinc.com>

Pricing	Quote-based. Solo plans estimated \$600–\$900/mo minimum. Team/brokerage plans higher. Pricing reported to increase frequently. Sales call required.
Target Market	Established real estate teams and brokerages with budget to invest; not designed for solo agents on tight margins

Strengths	Weaknesses
• Managed ad system generates consistent, market-specific buyer and seller leads • User-friendly CRM easier to navigate than enterprise-level platforms • Responsive support and strong onboarding experience across review platforms	• One of the most expensive platforms in the category with opaque, reportedly increasing prices • Lead quality complaints are common; volume doesn't always translate to conversion • Support only available Monday–Friday — a gap for agents who work weekends

Notable: ■ Managed Facebook + Google ads ■ Monday–Friday support only ■ Prices reportedly increase frequently

Gap Analysis

Market Gaps

• No done-for-you AI automation agency exists at scale in the real estate vertical — all 8 competitors are self-serve SaaS products
• Solo agents (60%+ of NAR's 1.5M members) have no affordable, full-featured AI automation solution under \$200/mo
• SOI (sphere-of-influence) automation for past clients and referral networks is ignored by all eight competitors
• Outcome-based or performance-tied pricing (pay-per-appointment) does not exist anywhere in the market
• Weekend and after-hours automation support is absent — CINC and others cover Monday–Friday only

Opportunities

• Custom automation tailored to each agent's workflow is the core differentiation — SaaS platforms force agents into a rigid feature set they rarely fully use
• Solo agent productized package at \$99–\$149/mo would capture the single largest underserved segment in the market
• Brokerage partnerships: a single brokerage with 50 agents at a custom rate outperforms 50 individual client deals and builds brand credibility
• SOI automation module (past client drips, referral sequences, anniversary triggers) addresses a universal pain point no competitor has touched
• AI voice follow-up built at Ylopo RAIYA benchmark pricing would be a first-mover advantage in the sub-\$500/mo segment

Threats

• Lofty AOS (Feb 2026) is the first agentic AI OS for real estate — if it matures into 'self-managing' automation, the done-for-you moat shrinks; build proprietary workflows and client lock-in now
• Follow Up Boss (Zillow-owned) already offers free AI response drafting on all plans — one of the core pain points agencies compete on
• General AI platforms (Make, Zapier AI, n8n) are adding real estate templates cheaply, lowering the barrier for agents who want to DIY
• OpenAI and Anthropic real estate assistants could commoditize basic follow-up automation within 12–18 months

Recommended Actions

1. [HIGH]	Lead every pitch with 'done-for-you vs. SaaS' positioning
Rationale:	Most prospects don't know this category exists. All 8 competitors are self-serve platforms; educating on the distinction is the fastest path to converting conversations into clients.
2. [HIGH]	Launch a productized solo agent automation package at \$99–\$149/mo
Rationale:	60%+ of NAR's 1.5M members are solo agents priced out of every capable platform. This is the single largest underserved segment and an uncontested price point.
3. [HIGH]	Build or white-label AI voice follow-up to match Ylopo RAIYA benchmarks
Rationale:	Voice AI at 48% response rate is setting the category benchmark. Accessing it currently requires \$1,000–\$1,500 in setup fees plus \$500–\$2,000/mo in platform spend — a price point an agency can undercut with better tailoring.
4. [MEDIUM]	Pursue one brokerage partnership deal in Q3 2026
Rationale:	A single brokerage with 50 agents on a custom retainer outperforms 50 individual client deals, builds referenceable brand authority, and opens a distribution channel that SaaS platforms can't easily replicate.
5. [MEDIUM]	Develop an SOI automation module as a standalone product or client add-on
Rationale:	Past client drips, referral partner sequences, and anniversary/birthday triggers address a universal agent pain point that not one of the 8 competitors has built. First-mover advantage is available.
